(814) 826-9031 | fna106@gmail.com

Bilingual (English and Arabic)

EDUCATION

The Pennsylvania State University

B.S. Social Data Analytics | B.S. Hospitality Management | B.S. Biotechnology

Minors: Entrepreneurship and Innovation | Microbiology

Programming & Data: Python, SQL, R, PostgreSQL, Data Wrangling, Data Modeling, ETL/ELT Pipelines, Data Validation

Business Intelligence & Reporting: Tableau, Power BI, Advanced Excel, Salesforce, Dashboard Development, KPI Reporting, Executive Reporting

AI, Cloud & Development: Machine Learning, Generative AI, NLP, LLM Applications, RAG, Workflow Automation, Azure, Google Cloud, Flask, Git

EXPERIENCE & PROJECTS

Development and Strategies Analyst

Hilton

McLean, VA

May 2024 – May 2025

- Extracted, validated, and analyzed Salesforce data used in recurring business reviews, dashboards, forecasting materials, and leadership reporting.
- Segmented hotel development and performance data by brand, region, market, owner, management type, chain scale, and pipeline stage to identify trends and support strategic decisions.
- Supported key-money analysis by comparing projected revenue, incentive costs, and development opportunities to help evaluate profitability and expected return.
- Built and maintained Tableau and Excel reports used to track hotel growth, pipeline performance, and changes across markets and business segments.
- Consolidated data from Salesforce and internal sources, resolved discrepancies, strengthened validation processes, and translated findings into clear executive summaries and visualizations.

Research Assistant - Data Engineering and Applied AI

Penn State Center for Social Data Analytics

University Park, PA

August 2025 – Present

- Built Python-based data pipelines processing 3,300+ public meeting videos and transforming raw video, audio, transcripts, and metadata into structured datasets for analysis.
- Developed an end-to-end RAG workflow using semantic embeddings, structured codebooks, and open-source LLMs to automate classification of unstructured text extracted from public meeting videos.
- Designed prompt, retrieval, parsing, and validation processes and evaluated performance using F1 scores, confusion matrices, confidence intervals, and error analysis.
- Deployed and tested open-source LLMs in a GPU-based HPC environment using Hugging Face, vLLM, CUDA, and model quantization.

Customer Service Agent – Reporting and Operations Support

Naqel Express

Dammam, Saudi Arabia

December 2018 – August 2021

- Investigated lost-shipment claims by tracing shipment records, validating shipment values, and estimating potential company financial exposure.
- Produced weekly Excel reports tracking unresolved claims, expected payout costs, resolved cases, and cost reductions achieved through shipment recovery.
- Built an Excel-based performance tracking system and recurring KPI reports for management while training new employees on logistics systems and reporting processes.

Project Lead & Developer

FreeFoodMap - Food Decisions Research Laboratory

University Park, PA

August 2023 – Present

- Built a Flask and PostgreSQL data platform managing 890+ free-food resource locations, with public search, interactive mapping, and role-based access for users, organizations, volunteers, and administrators.
- Designed data collection and validation workflows combining web-scraped records, manual review, community submissions, issue reporting, and duplicate detection to improve data accuracy and reliability.
- Deployed the application on Azure and later migrated it to Google Cloud, gaining experience with cloud hosting, database connectivity, and platform migration.
